

All that the National Association of Broadcasters opposes is innovation and competition. While XM Radio is certainly becoming a force in the radio market, there will always be a large place for traditional television and radio, whether or not XM offers local content. Not only should XM be allowed to offer local traffic and weather reports - it should also be allowed to broadcast local radio stations similar to how satellite television companies can now carry local television stations. Nothing XM does is unlawful - it is simply the next big innovation in our technological society.
